

What Type of AI Leader Are You?

Your AI leadership style reflects how you currently engage with AI. This quick self-assessment helps you identify your AI leadership archetype in just a few minutes.

- The Explorer is learning what's possible with AI.
- The Architect is preparing an AI foundation to build on.
- The Champion is using AI and regularly sharing ideas.
- The Innovator is building custom solutions to use and share.

What to do: Answer these questions based on where you are today—not where you think you should be. Afterward, you'll learn your archetype and what it means for your learning journey.

SELF-ASSESSMENT

Start Your Self-Assessment

Begin Assessment

1- How would you describe your understanding of AI terminology (such as large language model, prompt, or generative AI)?

I'm not familiar with most AI terms.

I know some basics but would struggle to explain them.

I can confidently explain common AI terms to colleagues.

I understand advanced concepts and can discuss AI architecture.

2- What's your experience with chat-based AI tools like Microsoft Copilot, ChatGPT, or Claude?

I haven't tried any AI tools yet. I've experimented a few times but don't use AI regularly. I use AI tools regularly for work tasks. I've customized AI tools or built AI-powered workflows.

3- When thinking about your organization's data, which statement best describes your situation?

I'm not sure what data we have or how it's organized. I understand we need to prepare our data for AI but haven't started. Our data is organized and accessible to the AI tools we're using. I've helped design data strategies specifically for AI solutions.

4- How confident are you in writing effective prompts to get useful results from AI?

I wouldn't know where to start. I've tried but my results are inconsistent. I get good results and have developed techniques that work. I've trained others on prompting and created prompt templates.

5- What's your involvement with AI strategy at your organization?

I'm learning what AI can do before thinking about strategy. I'm identifying how AI might fit into our current processes. I actively use AI and share successful approaches with my team. I lead AI initiatives or have built AI solutions that others use.

6- How would you describe your organization's AI infrastructure readiness?

I don't know what infrastructure is needed for AI. We're evaluating what's required to deploy AI safely. Our systems are set up and people are using AI tools. I've helped implement or extend our AI infrastructure.

7- What's your team's relationship with AI in their daily work?

My team is still learning what AI is and how it works. My team is testing out different AI tools to see where they fit best. AI is part of the regular workday—my team is using it almost every day. We have been creating or customizing AI for specific workflows.

8- How familiar are you with responsible AI principles (fairness, transparency, accountability)?

I haven't explored frameworks for responsible AI yet. I've heard of these concepts and want to learn more. I consider responsible AI principles when using AI tools at work. I help ensure our AI implementations follow responsible AI guidelines.

9- When you think about expanding AI in your organization, what's your primary focus?

Understanding what AI actually is and what it can do
Getting our systems, data, and security ready for AI
Helping more people use AI tools effectively
Developing custom AI applications or agents for specific needs

10- Which statement best captures your AI goals right now?

I want to build a strong foundation of AI knowledge. I want to prepare my organization's infrastructure and data for AI. I want to maximize the value I get from AI tools in my team's daily work. I want to build or extend AI solutions to solve unique business problems.
